

Git Interview Questions and Answers (3+ Years Experience)

1. Git Fork vs Git Clone

Q1. Difference between fork and clone?

- > Fork copies someone's repo to your GitHub account.
- > Clone copies the repo to your local system.

Q2. When would you fork?

- > When contributing to another repo.

Q3. Sync your fork:

`git remote add upstream <original-url>`

`git fetch upstream`

`git merge upstream/main`

2. Git Reset

Q4. What does 'git reset HEAD~1' do?

- > Removes the last commit.

Q5. Difference between soft, mixed, hard?

- > soft: keeps changes staged
- > mixed: keeps changes, unstaged (default)
- > hard: deletes commit and code

Q6. Recover from hard reset?

- > Use 'git reflog' to find lost commit ID.

3. Git Revert

Q7. Revert vs Reset?

- > Revert creates a new commit to undo changes.
- > Reset removes the commit.

Git Interview Questions and Answers (3+ Years Experience)

Q8. Use revert when you want to undo but keep history.

Q9. Revert creates a reverse commit.

4. Git Rebase

Q10. Purpose of rebase?

-> Apply your changes on latest base branch.

Q11. Rebase vs Merge:

-> Rebase creates clean history; Merge keeps history.

Q12. Use case: clean history before push.

Q13. Conflict: fix -> git add . -> git rebase --continue

5. Git Cherry-pick

Q14. What is cherry-pick?

-> Apply a specific commit from another branch.

Q15. Use when you want one commit only.

Q16. Risk: if commit depends on others, it may break.

6. Git Stash

Q17. What is stash?

-> Temporarily save changes.

Q18. Restore with: git stash pop

Q19. Stash is temporary, commit is permanent.

Git Interview Questions and Answers (3+ Years Experience)

Q20. Yes, multiple stashes are allowed. Use 'git stash list'.

7. Git Tag

Q21. Lightweight vs Annotated?

-> Lightweight: no message, just pointer.

-> Annotated: has message, author info.

Q22. List: git tag

Q23. Delete: git tag -d v1.0

Q24. Tag a commit: git tag -a v1.0 -m "msg" <commit-id>

Push: git push origin v1.0

8. Git Hook

Q25. What are hooks?

-> Scripts triggered during git events.

Q26. Pre-commit hook? Runs before commit to check code.

Q27. Make hook executable: chmod +x .git/hooks/pre-commit

Q28. Hooks are local only, not pushed to remote.

9. General Git

Q29. Show history: git log --oneline

Q30. Origin vs Upstream?

-> Origin: your GitHub repo

-> Upstream: original forked repo

Git Interview Questions and Answers (3+ Years Experience)

Q31. Resolve conflict: fix -> git add . -> git commit

Q32. Tracked = added to Git, Untracked = new file

Q33. git pull = fetch + merge from remote
