

Jenkins as a Tomcat web APP (jenkins.war)

- Clear the terminal screen
clear
- install java 17
yum install java-17-amazon-corretto.x86_64 -y
- Create a Directory for servers
cd /mnt
mkdir servers
cd servers/
→ going into /mnt and creating a folder named servers to keep all server-related software like tomcat)
- Download Tomcat
wget https://dlcdn.apache.org/tomcat
- Unzip tomcat
unzip apache-tomcat-10.1.42.zip
- Delete zip file
rm -rf apache-tomcat-10.1.42.zip
- List Files
ls -ltr
- Give Full Permission
chmod -R 777 apache-tomcat-10.1.42/
→ Give read, write, execute permission to all users.
- Go to Tomcat - webapps folder
cd apache-tomcat-10.1.42/
cd webapps/
- Download jenkins WAR
wget http://get.jenkins.io/war-stable/latest/jenkins.war
- Start Tomcat
cd ../
cd bin

- /startup.sh → which starts the tomcat server
- check tomcat logs

```
cd ../
```

```
cd logs/
```

```
ls -ltr
```

```
tail -1000 catalina.out
```

- Go Back and check WAR Deployment

```
cd ../
```

```
cd webapps/
```

```
ls -ltr
```

- Finds Jenkins Admin password.

```
cd
```

```
cd /root/
```

```
ls -ltr
```

```
cd .jenkins/
```

```
ls -ltr
```

```
cd secrets/
```

```
cat initialAdminPassword
```

- check plugins folder (optional)

```
cd ../
```

```
cd plugins/
```

```
ls -ltr
```

```
pwd
```

Final result

- jenkins running at `http://<EC2-IP>:8080/jenkins`

- first time login password found

- Tomcat server is running jenkins as a WAR app

TIP :- If you open browser and go to

`http://<ec2-ip>:8080/jenkins`

you will see the jenkins setup screen.
